

PROFESSIONAL SUMMARY

Results-driven Software Engineer with over four years of experience designing and delivering scalable full-stack applications across financial and healthcare domains. Expertise in building Java 11 and 17 and Spring Boot microservices, developing responsive frontend applications with React and Angular, and deploying cloud-native solutions on AWS using Docker and Kubernetes EKS. Skilled in designing secure, high-performance APIs, optimizing relational and NoSQL databases including MySQL, PostgreSQL, and MongoDB, and implementing CI and CD pipelines to enable reliable, automated releases. Experienced in event-driven architectures, distributed systems, and cross-functional Agile teams, with a strong focus on performance optimization, system reliability, and maintainable enterprise solutions.

TECHNICAL SKILLS

- Programming Languages:**Java 17, Java 11, Java 8, Python, JavaScript, TypeScript, SQL, C++, R, Shell Scripting
- Backend & Frameworks:** Spring Boot, Spring Framework, Spring MVC, Spring Data JPA, Spring Security, Spring Batch, Hibernate, Microservices Architecture, Node.js, REST APIs, Lambda Expressions
- Frontend & UI Technologies:** React, Redux Toolkit, Next.js, Angular, PrimeNG, Material-UI, HTML5, CSS3, SCSS, Tailwind CSS, Bootstrap, Responsive User Interface and User Experience Design, WebSockets, Component-Based Architecture, React Hooks, UI Performance Optimization
- Cloud Platforms & Services:** AWS (EC2, S3, RDS, ECS, EKS, Lambda, SNS, SQS, CloudWatch, IAM), Azure Fundamentals, Azure DevOps
- Databases & Storage:** MySQL, PostgreSQL, MongoDB, Redis, Oracle (PL/SQL)
- Microservices, Messaging & Streaming:** Apache Kafka, RabbitMQ, Event-Driven Architecture
- API Development, Integration & Testing:** RESTful APIs, JSON, Swagger, OpenAPI, Postman, SoapUI, WireMock, Pact, Stoplight, JUnit, Mockito FHIR, HL7, SMART on FHIR
- Containerization and Orchestration:** Docker, Kubernetes, Helm
- DevOps & Automation:** Jenkins, GitHub Actions, GitLab CI and CD, AWS CodePipeline, Terraform, Maven, Gradle, Python Automation
- Monitoring, Logging & Observability:** Prometheus, Grafana, Splunk, Jaeger, ELK Stack, CloudWatch
- Security, Quality & Governance:** OAuth2, JWT, AWS IAM, HashiCorp Vault, SonarQube, Fortify, Snyk
- Version Control & Collaboration:** Git, GitHub, Bitbucket, JIRA, Confluence
- Methodologies:** Agile, Scrum, Kanban, SDLC, CI and CD, Secure Coding Practices

EXPERIENCE

- Wells Fargo | Software Developer | New York, NY Jan 2025 To present**
- Developed scalable Java 17 Spring Boot microservices for digital banking services including account onboarding, payments, and transaction monitoring, reducing API latency by 25%.
 - Built real-time customer dashboards using React 18 and Redux Toolkit, enabling secure account visibility and transaction insights for thousands of users.
 - Implemented event-driven architecture using Apache Kafka, processing millions of financial events daily for fraud monitoring and audit workflows.
 - Improved system performance using Redis caching and optimized SQL queries (MySQL, PostgreSQL), reducing database load and improving response times by 35%.
 - Containerized services with Docker and deployed on Kubernetes (EKS) with automated scaling and rolling updates.
 - Utilized AWS services (S3, RDS, SNS, SQS, CloudWatch) to build resilient cloud-native applications with improved observability.
 - Built CI/CD pipelines using Jenkins and GitHub Actions, reducing deployment time and enabling reliable automated releases.
 - Implemented monitoring and logging using Prometheus, Grafana, ELK, and CloudWatch to improve incident response and maintain high uptime.
- OPTUM | Software Engineer | Edison, NJ April 2024 - Dec 2024**
- Developed healthcare data integration services using Java 17 and Spring Boot, enabling secure processing of patient records and clinical workflows.
 - Implemented FHIR and HL7 integrations to exchange healthcare data between hospital systems and insurance platforms.
 - Built REST APIs for patient data access, appointment management, and insurance claim processing, improving system interoperability.
 - Developed responsive healthcare dashboards using React, TypeScript, and Next.js to visualize patient metrics and operational insights.
 - Implemented secure authentication using OAuth2 and JWT, ensuring HIPAA-compliant access control for sensitive healthcare information.
 - Integrated Kafka-based event pipelines for real-time healthcare notifications and data synchronization across distributed services.
 - Deployed containerized microservices using Docker and Kubernetes on AWS EKS, enabling scalable healthcare application deployments.
 - Automated infrastructure provisioning with Terraform and CI/CD pipelines using Jenkins, improving deployment reliability.
- Cognizant | Front-End Engineer | Hyderabad, India Jan 2021 – Aug 2023**
- Designed and delivered end-to-end enterprise applications using React, Angular, TypeScript, Java Spring Boot, and REST APIs, improving user experience, system responsiveness, and workflow efficiency across business platforms.
 - Developed scalable enterprise applications using React, Angular, and Spring Boot APIs, improving platform usability and performance.
 - Built reusable frontend component libraries enabling consistent UI architecture across multiple applications.
 - Implemented secure API integrations using OAuth2 authentication and REST services.
 - Optimized frontend performance using lazy loading, memoization, and efficient state management, reducing page load time by 25%.
 - Automated build and deployment pipelines using Jenkins and GitHub Actions, improving release reliability.

ACHIEVEMENTS

- Improved backend service performance by optimizing Spring Boot APIs, database queries, and Redis caching, reducing response latency by 35% in high-traffic production environments.

- Designed and deployed event-driven microservices using Kafka, enabling reliable processing of millions of real-time events for transaction monitoring and notifications.
- Migrated legacy applications to cloud-native infrastructure on AWS, leveraging Docker and Kubernetes to improve system scalability, fault tolerance, and deployment efficiency.
- Increased code quality and reliability by implementing automated testing frameworks using JUnit and Mockito, achieving 90%+ test coverage and reducing production defects.

PROJECTS

ShopEase (E-Commerce Microservices Platform)

- Designed and developed scalable backend microservices using Java, Spring Boot, and SQL Server to manage more than one thousand product records with real-time inventory updates and reliable data consistency.
- Implemented RESTful APIs for product creation, updates, deletion, and retrieval with validation, error handling, and optimized database queries to ensure low latency and stable backend performance.
- Built a responsive user interface using React and Redux, enabling efficient product browsing, category-based filtering, and consistent state management across multiple views to improve user experience.
- Integrated frontend and backend services to deliver end-to-end inventory workflows and deployed the application in a cloud-ready environment, improving responsiveness by approximately 30 percent and reducing manual data handling.
- Applied clean architecture, modular design patterns, and version-controlled deployments, improving maintainability and reducing feature development time by about 20 percent while supporting scalable future enhancements.

Real-Time Payment Processing System

- Developed an event-driven payment processing platform using Spring Boot and Apache Kafka to process real-time financial transactions.
- Implemented idempotent event processing and dead-letter queues to ensure reliable message delivery.
- Optimized transaction workflows using Redis caching and PostgreSQL, reducing processing latency by 40%.
- Deployed microservices on Kubernetes with CI/CD pipelines, enabling automated scaling and fault-tolerant deployments.

EDUCATION

Master of Science in Data Science | New Jersey Institute of Technology
Bachelor of Technology in Electrical and Electronics Engineering | Gokaraju Rangaraju Institute of Technology

CERTIFICATIONS

- Microsoft Certified: Azure Developer Associate
- AWS Certified Solutions Architect – Associate - Amazon web services
- Certified Kubernetes Administrator CKA – Cloud Native Computing Foundation
